

Power BI Assessment

Task 1: Data Import

1. Open Power BI Desktop.
2. Import the `sample-superstore.xls` file as a data source.
3. Create a data model with the necessary relationships (e.g., sales data, product data, customer name).

Task 2: Data Transformation

1. Create calculated columns for:
 - Total Revenue (Sales Amount minus Discount)
 - Discount Percentage
2. Filter the data to include only the last 12 months of the shared data.
3. Create a hierarchy for Date:
 - Year
 - Quarter
 - Month

Task 3: Data Visualization

1. Create a bar chart to show total sales by product category.
2. Build a line chart to visualize the monthly sales trend.
3. Create a matrix table to display sales by customers and product category.
4. Add slicers for filtering by:
 - Year
 - Product Category
5. Arrange all visualizations and slicers appropriately on the report canvas.

Expected Deliverable

A Power BI dashboard containing:

- Imported and transformed data
- Data model relationships
- Calculated columns and date hierarchy
- Interactive visualizations
- Functional slicers
- Properly organized report canvas layout
